

PHARC: Photo Archiving Application

Saul Reynolds-Haertle, James Cline, Abhishek Shroff,
Michael Polson

February 22, 2012

What is PHARC?

PHARC:
Photo
Archiving
Application

Saul
Reynolds-
Haertle,
James Cline,
Abhishek
Shroff,
Michael
Polson

Introduction

Project Plan

Storage

Interface

Conclusion

Plastic Surgeons need to organize lots of pictures. However, they don't have good software:

- Need to organize around patients, diagnoses, treatments
- Have particular interface requirements
- Need particular storage requirements

Client asked us to build special application

Basic Client Requirements

PHARC:
Photo
Archiving
Application

Saul
Reynolds-
Haertle,
James Cline,
Abhishek
Shroff,
Michael
Polson

Introduction

Project Plan

Storage

Interface

Conclusion

- Search archive by patient, treatment, diagnosis, physician, etcetera
- Easy interoperability with email, photo editing, and powerpoint
- Transparent filesystem layout. No opaque databases!

Basic Implementation

PHARC:
Photo
Archiving
Application

Saul
Reynolds-
Haertle,
James Cline,
Abhishek
Shroff,
Michael
Polson

Introduction

Project Plan

Storage

Interface

Conclusion

- Building a local application
- Using Python and Qt for cross-platform functionality
- Open-source using git and github
- Modular design to help with scheduling

Basic Schedule

PHARC:
Photo
Archiving
Application

Saul
Reynolds-
Haertle,
James Cline,
Abhishek
Shroff,
Michael
Polson

Introduction

Project Plan

Storage

Interface

Conclusion

- Sprint 1: Define project
 - Collect user stories
 - Write up project requirements
 - Begin backend implementation
- Sprint 2: Initial implementation
 - GUI Implementation and integration
 - Backend fine-tuning
- Sprint 3: Refinement
 - GUI Refinement
 - Begin multi-user support
 - Iterate design with client

Storage Requirements

PHARC:
Photo
Archiving
Application

Saul
Reynolds-
Haertle,
James Cline,
Abhishek
Shroff,
Michael
Polson

Introduction

Project Plan

Storage

Interface

Conclusion

- Multiple-user simultaneous access
- Works over network drives
- User can access archive without using application

Storage Architecture

PHARC:
Photo
Archiving
Application

Saul
Reynolds-
Haertle,
James Cline,
Abhishek
Shroff,
Michael
Polson

Introduction

Project Plan

Storage

Interface

Conclusion

- Our solution: use the filesystem.
 - Organize photos into directories by patient and session
 - Store notes and other information in text files
- This is slow, though. Solution: database cache
 - Cache information in local database
 - Maintain separate database per user
 - Also makes network operation bearable

Interface Implementation

PHARC:
Photo
Archiving
Application

Saul
Reynolds-
Haertle,
James Cline,
Abhishek
Shroff,
Michael
Polson

Introduction

Project Plan

Storage

Interface

Conclusion

- Framework: Qt
 - Popular, well-supported
 - Powerful
 - Cross-platform
- Python doesn't do threading, so processes instead

Interface Design

PHARC:
Photo
Archiving
Application

Saul
Reynolds-
Haertle,
James Cline,
Abhishek
Shroff,
Michael
Polson

Introduction

Project Plan

Storage

Interface

Conclusion

- Import window
- Main window for searching/selecting patients
- Patient Detail window for viewing/editing patient information
- Image Edit window for lightweight editing operations

Conclusion

PHARC:
Photo
Archiving
Application

Saul
Reynolds-
Haertle,
James Cline,
Abhishek
Shroff,
Michael
Polson

Introduction

Project Plan

Storage

Interface

Conclusion

- Where we want to be: a photo archiving application
- Where we are now:
 - Client requirements
 - User stories
 - Working on backend
 - GUI design done and beginning mockups
- Where we plan to go:
 - Finish GUI and backend
 - Integrate GUI and backend
 - Begin design verification and QA
- Any questions?
